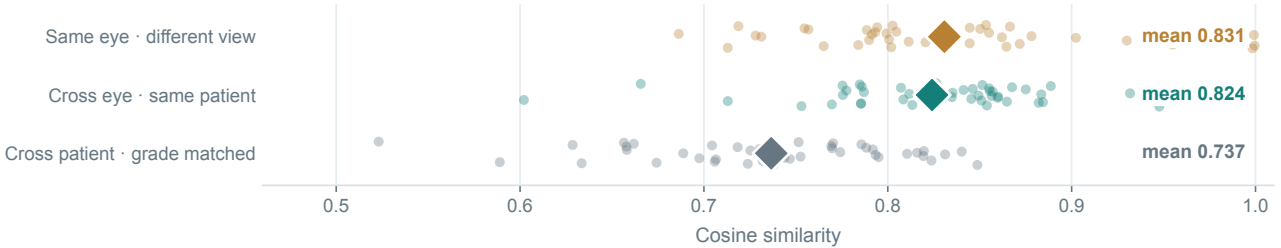
VIEW HIERARCHY

Cross-eye similarity survives grade matching

Same-eye and cross-eye means are close; the uncertainty on their difference includes zero.

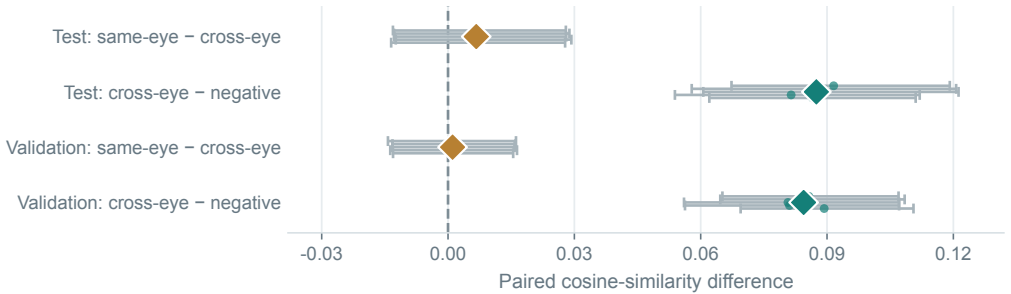
A Patient-level test distribution

DeepDRiD · 43 complete four-view test patients · frozen features



B Paired gaps with patient-level uncertainty

Five fixed grade-matched negative seeds · 3,000 paired-patient bootstrap resamples per seed



Dots/thin whiskers: seed-specific gap and patient-bootstrap 95% CI. Diamond: mean gap over seeds; CIs are not pooled.
