CONDITIONAL EVIDENCE

Correspondence persists under stricter negatives

Frozen ResNet-50 features; distinct panels report the full cohort, held-out view combinations and nuisance probes.

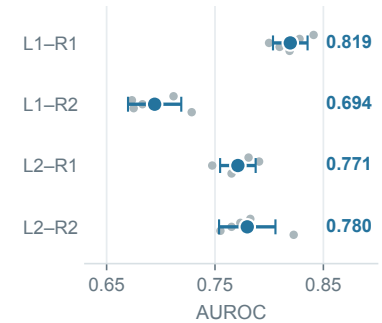

A Disease and quality matched negatives

Full DeepDRiD cohort · 300 patients · five fixed negative seeds

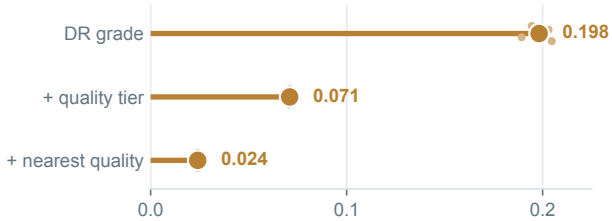

B Four cross-eye pairs

Held-out test · 43 eligible patients

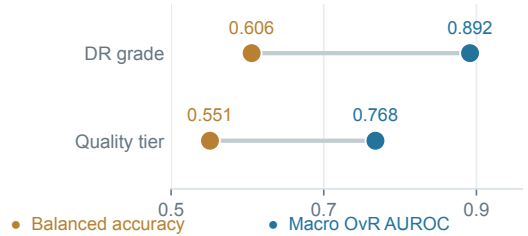

C Quality matching is tighter

Mean absolute quality-composite difference

D Nuisance remains readable

Train-fitted probes on 44 test patients

Gray trajectories: five negative-pair seeds; gray offset whiskers: envelope of seedwise patient-bootstrap 95% CIs.
Teal: mean ± across-seed sample SD (n = 5). AUROC chance = 0.5, outside the enlarged plotting range.
